

## **2006 Coastal Pollutant Remediation Grant Program Funded Projects**

### **Proponents: Town of Wellfleet**

Project Title: *Wellfleet Harbor Pumpout Facility*

Watershed: Cape and Islands

Award: \$35,100

The Town of Wellfleet has been awarded \$35,100 to construct a vessel pumpout station along the south side of Wellfleet Pier. The facility will replace a portable wagon that is currently used to remove sewage from berthed vessels. The project is the implementation phase of a previous design project funded under the CPR program in 2004. It is part of a long-term rehabilitation plan to improve Wellfleet Pier and improve water quality in Wellfleet Harbor.

### **Proponents: Town of Dennis**

Project Title: *Bass River and Follins Pond BMP Implementation*

Watershed: Cape and Islands

Award: \$133,050

The Towns of Dennis and Yarmouth have been awarded \$133,050 to address stormwater pollution in the Bass River Follins Pond estuary. This is the third phase of a plan to assess and remediate stormwater sources along the Dennis and Yarmouth sides of this river system. This project will install BMP systems at four priority sites in Dennis, and one priority site in Yarmouth.

### **Proponents: Town of Bourne**

Project Title: Conservation Pond BMP Implementation

Watershed: Cape and Islands

Award: \$138,375

The Town of Bourne has been awarded \$138,375 for the installation of infiltrating BMP structures in the upper reaches of the Conservation Pond watershed. This is the second phase of this project. The assessment and engineering design were funded under a CPR assessment grant in 2004. A third phase of this project is planned to address the stormwater drainage in the lower reaches of the watershed.

### **Proponents: Town of Provincetown**

Project Title: *Provincetown Harbor BMP Implementation Phase II*

Watershed: Cape and Islands

Award: \$116,640

The Town of Provincetown has been awarded \$116,640 to implement stormwater BMP structures at an existing stormwater outfall within the Provincetown Harbor watershed. The town has developed a comprehensive stormwater management plan, with a 10-year implementation plan. The town conducted a comprehensive stormwater assessment project in 2003. The first step in addressing the assessment's recommendation was taken in 2005, with a CPR funded implementation project at Atlantic Avenue. This project will address the next priority site at the west end of the harbor.

**Proponents: Town of Barnstable**

Project Title: *Hyannis Inner Harbor Stormwater Mitigation Project*

Watershed: Cape and Islands

Award: \$102,700

The Town of Barnstable has been awarded \$102,700 to infiltrate stormwater from two large drainage areas that currently discharge into the harbor. A Coastal Nonpoint Source (NPS) grant-funded stormwater assessment performed in 2004 identified these sights high priority mitigation areas in the Hyannis/Lewis Bay area.

**Proponents: Town of Rockport**

Project Title: *Stormwater Implementation for Lower Mill Brook*

Watershed: North Coastal

Award: \$30,260

The Town of Rockport has been awarded \$30,260 to implement various Best Management Practices as identified in the Lower Mill Brook Nonpoint Source Pollution Assessment project, funded through a CZM Coastal NPS grant in 2004. In addition to various nonstructural BMPs, this project proposes to replace existing catch basins with new, 4-foot, hooded catch basins.

**Proponents: Town of Orleans**

Project Title: *Jeremiah's Gutter Stormwater Mitigation*

Watershed: Cape and Islands

Award: \$90,800

The Town of Orleans has been awarded \$90,800 to install a stormwater infiltration system at one town owned property, and a bio-filter at another town property. The project is a cooperative effort between the Orleans Water Quality Task Force, the Town of Orleans and Mass Highways. Mass Highways has agreed to grant an easement and permit for the construction of stormwater BMPs on its property.
